

## Which AirTurn Pedal should I purchase?

All AirTurn foot controllers work with hundreds of apps for iOS, MAC, PC, and Android. A full list of apps is available on the AirTurn website [www.airturn.com/apps](http://www.airturn.com/apps) with new ones added regularly. Turn pages, scroll, manage effects, send MIDI signals, trigger a metronome, change keys on the fly,

The **PEDpro** is an entry level, yet professional foot controller that is a low-cost, versatile, self-contained, and two foot switches. It uses a light touch of the foot for silent actuation. It uses low energy Bluetooth and is battery powered with a rechargeable lithium polymer battery lasting 150 hours on a charge. Five different modes are available to work with over 100 apps on iOS, Android, MAC and PC. *(Works only with Bluetooth 4.0 or SMART READY tablets and computers).*

The **DUO** two pedal controller is ideal for recording artists and professional musicians who need an absolutely silent action but still want a tactile feel. The Bluetooth transceiver can be easily removed for hand held use. There are six modes to choose from for many different application possibilities. The rechargeable lithium battery lasts about 100 hours on a charge and can be charged thousands of times.

The **QUAD** is a four pedal controller for users who need absolutely silent control and still have a tactile feel. With the QUAD, you can turn pages with two of the pedals and navigate set lists with the other two. Or assign effects and MIDI presets (App required) to turn your QUAD into a virtual wireless instrument effects rig. There are dozens of different options for programming the pedals. Check out the list of 4-Pedal Apps on the AirTurn website. The QUAD uses the same BT-106 transceiver as the DUO.

The **STOMP 6** uses six quieter versions of traditional stomp switches which are better suited for users who use them in loud environments with heavy vibrations or want a larger target to hit. Put them on a pedal board rack for easy setup at every gig and power off your 9V supply or use the internally supplied 9V battery. Apps such as OnSong give you the power to program each switch dozens of different options.

## Hand and Foot Control

All foot controllers except the PED allow you to remove the BT-106 Transceiver and use it as a handheld remote. There are six different modes that are programmed into the transceiver to control, music, effects, presentations, iTunes and other media players, iOS cameras and video devices. Custom modes available.

iBandManager Pro	Polaris Office 4.0	Virtual Sheet Music
iClassicalScores	PowerMusic/PowerMusic for iPad	
iCue	PowerPoint	
iGigBook	Presentation Prompter	

## Mac/PC Apps (AirTurn DIGIT BT-106, BT-105, AT-104)

AirTurn controllers will work with most document and presentation programs, as well as programs that can be configured with hotkeys to accept standard keyboard inputs. They also work with most DAWs that can be set up to accept keyboard macro input.
